

Course Registration System — Database Design

MongoDB collections and ObjectId references • Based on server/src/models

All six models define createdAt / updatedAt timestamps. Lines show collection relationships; labels show cardinality.

Unique keys: users.email; users.studentId (strings only); courses.code; terms.code;

offerings(course, term, section); records(student, course, term); registrations(student, offering).

Seats remaining = capacity – active registrations. Current registrations hold in-progress courses; records hold grades.

Internal collection: admin_mutation_guards {_id, revision} serializes admin account changes; no academic references.
